

Magnetic-inductive flow meter for hazardous areas

EPX / UMF3

Technical Datasheet

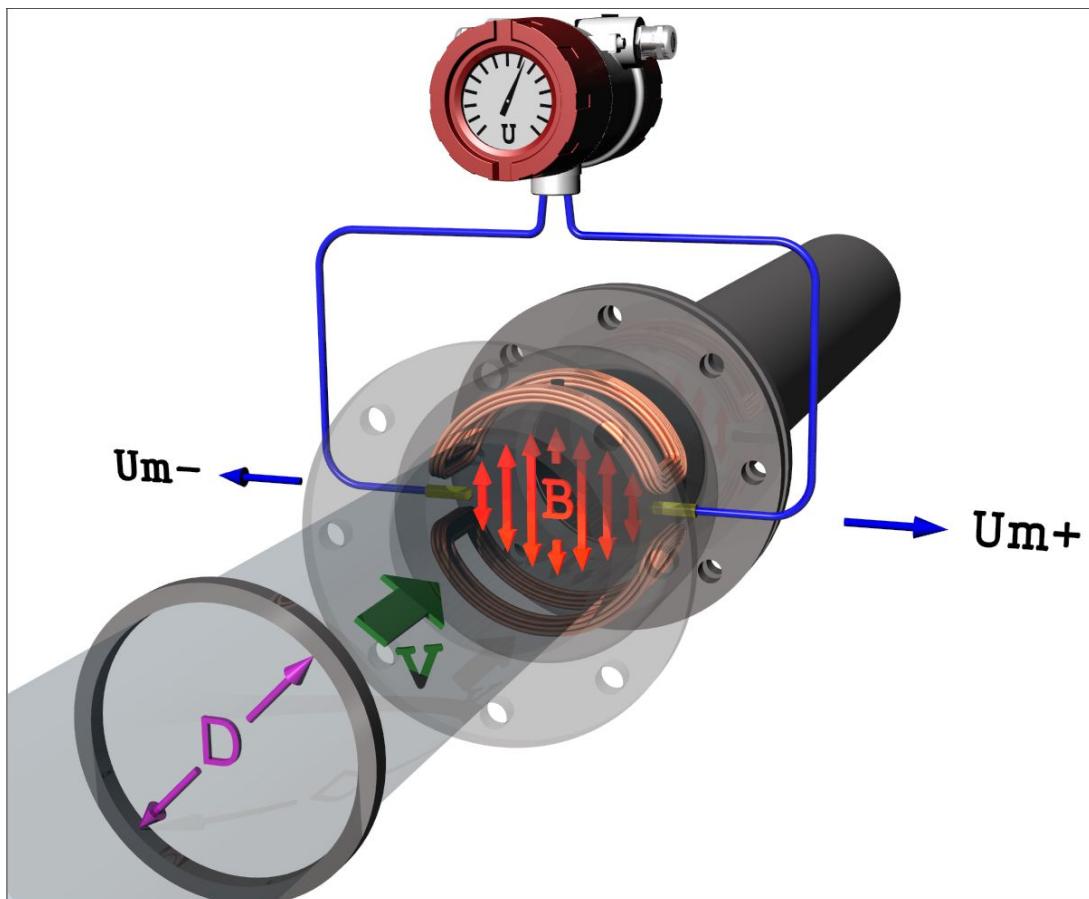

- **high accuracy:** 0.3 % of actual
- **maintenance-free**
- **no pressure drop**
- **numerous lining materials**
- **numerous electrode materials**
- **low-cost grounding electrode instead of earthing rings, also available in special materials e.g. Tantalum.**

Function

An electrically conductive medium flowing through an orientated magnetic field in accordance to Faraday's law of induction will induce a voltage proportional to the mean flow velocity rate and hence the volumetric flow. A magnetic inductive flowmeter consist of an isolated lined tube, through which a conductive liquid flows, a magnetic field coil and two electrodes. The electrode voltage is detected by a transmitter and converted into standardized electrical signal such as 4-20 mA or pulses. The sensor EPX can be used in combination with the Heinrichs Messtechnik UMF3 transmitter. The transmitter can be mounted compact or separately to the sensor.

Application

The magnetic-inductive flow sensor EPX is used to measure the volume flow of liquids, slurries, pastes and other electrically conductive media without any pressure drop. Pressure, temperature, density and viscosity do not affect the volume measurements. Solid particles and small gas bubbles should be avoided.

The sensor EPX has the following significant characteristics:

- Wide variety of lining materials
- Electrodes in Hastelloy C4, Tantalum, Platinum
- Deployable in harsh environments

Technical Data Sensor EPX

Armature	painted steel (Ex IIG), stainless steel (Ex IID)	
Nominal sizes:	DN15 to DN300 - ½" to 12" ANSI	
Process connections:	Flanges of steel or stainless steel (1.4301) (EN1092 und ASME B16.5),	
Lining material:	Wagunit (Hard-rubber), Soft-rubber, PTFE, E-CTFE	
Electrode material:	Hastelloy C4, stainless steel 1.4571/316 TI Titanium, Tantalum and Platinum-Rhodium Grounding rings (optional)	
Nominal pressure:	PN 40, (40 bar)	DN 15-50 (½"-2")
	PN 16, (16 bar)	DN 65-200 (½"-8")
	PN 10, (10 bar)	DN 250-300 (10"-12")
	<i>(higher pressure on request)</i>	
Process temperature:	-35 °C to +64 °C	Wagunit (Hard rubber)
	+5 °C to +64 °C	Soft rubber
	-35°C to +64 °C	PTFE / E-CTFE
	-35°C to +79 °C	PTFE / E-CTFE
	-35°C to +114 °C	PTFE / E-CTFE
	-35°C to +139 °C	PTFE
Ambient temperature:	-35 °C to +60 °C, depending on process temperature	
Conductivity:	>= 5 µS/cm >=20 µS/cm for demineralised water	
Measuring range:	0,1 m/s – 10 m/s	
Accuracy:	± 0,3 % of measured value ± 0,01 % * (Q at 10 m/s) (under reference conditions)	
Repeatability:	± 0,15 % of measured value ± 0,005 % * (Q at 10 m/s) (under reference conditions)	
Degree of protection:	IP 67 (EN60529), IP68 on request	
Explosion protection:	Ex II 2G Ex e ia IIC Gb Ex II 2D Ex tb IIIC Db	

Flow specific values

Recommended flow according to sensor size EPX

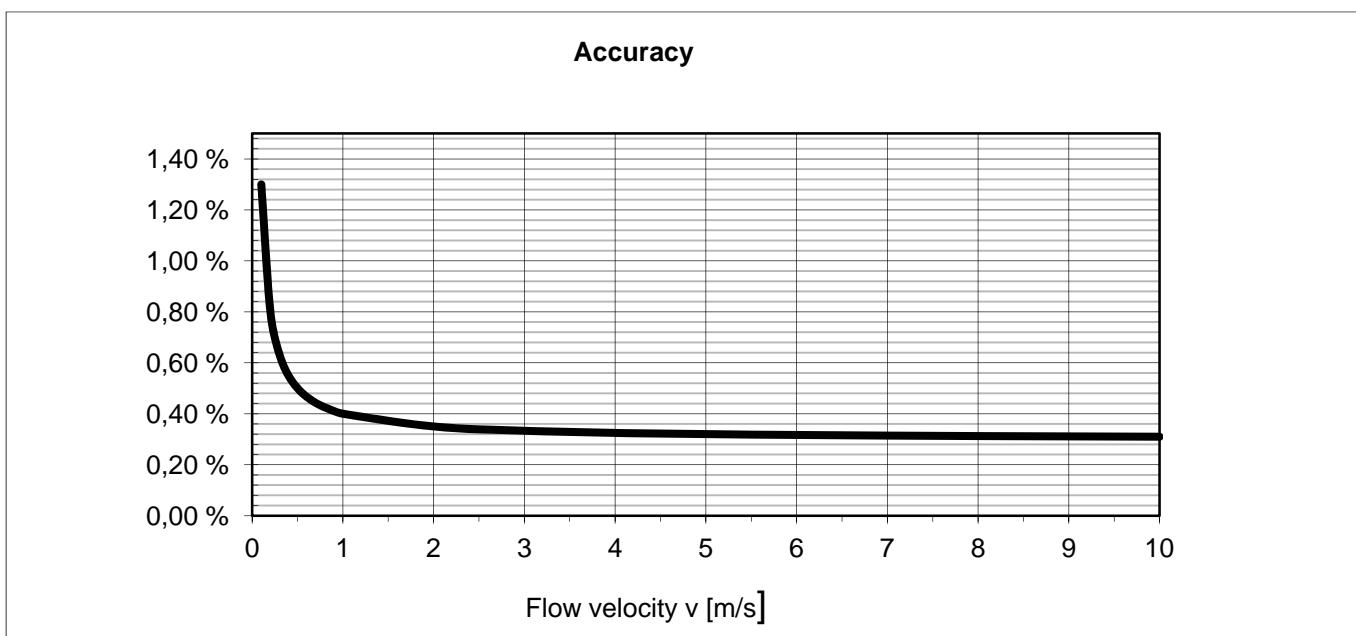

Measuring ranges					
Nominal diameter		Min/Max flow (0,1-10m/s)		Recommended measuring range (0,5-5m/s)	
[mm]	[inch]	Qmin (0,1m/s)	Qmax (10m/s)	Qmin (0,5m/s)	Qmax (5m/s)
15	1/2"	0,065 m³/h	6,5 m³/h	0,325 m³/h	3,25 m³/h
20	3/4"	0,12 m³/h	12 m³/h	0,6 m³/h	6 m³/h
25	1	0,18 m³/h	18 m³/h	0,9 m³/h	9 m³/h
32	-	0,3 m³/h	30 m³/h	1,5 m³/h	15 m³/h
40	1-1/2	0,45 m³/h	45 m³/h	2,25 m³/h	22,5 m³/h
50	2	0,72 m³/h	72 m³/h	3,6 m³/h	36 m³/h
65	-	1,2 m³/h	120 m³/h	6 m³/h	60 m³/h
80	3	1,8 m³/h	180 m³/h	9 m³/h	90 m³/h
100	4	2,8 m³/h	280 m³/h	14 m³/h	140 m³/h
125	-	4,3 m³/h	430 m³/h	21,5 m³/h	215 m³/h
150	6	6,5 m³/h	650 m³/h	32,5 m³/h	325 m³/h
200	8	11,5 m³/h	1150 m³/h	57,5 m³/h	575 m³/h
250	10	18 m³/h	1800 m³/h	90 m³/h	900 m³/h
300	12	25,2 m³/h	2520 m³/h	126 m³/h	1260 m³/h

Accuracy

+/- 0,3 % of measured value + 0,0001 * (Q at 10 m/s)

Repeatability

+/- (0,15 % of measured value + 0,00005 * (Q at 10 m/s))

Installation conditions

To avoid vacuum, emptying of pipes or gas aggregation please take notice of the following mounting advice

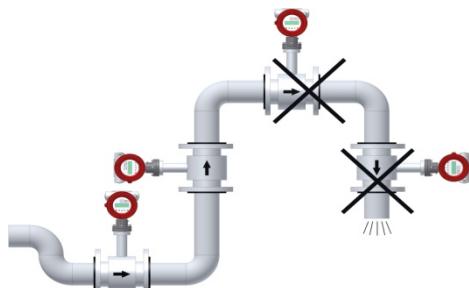

Emptying possible

Emptying avoided

Upstream of pump, vacuum possible

Mount in ascending main

Do not mount downstream of a valve

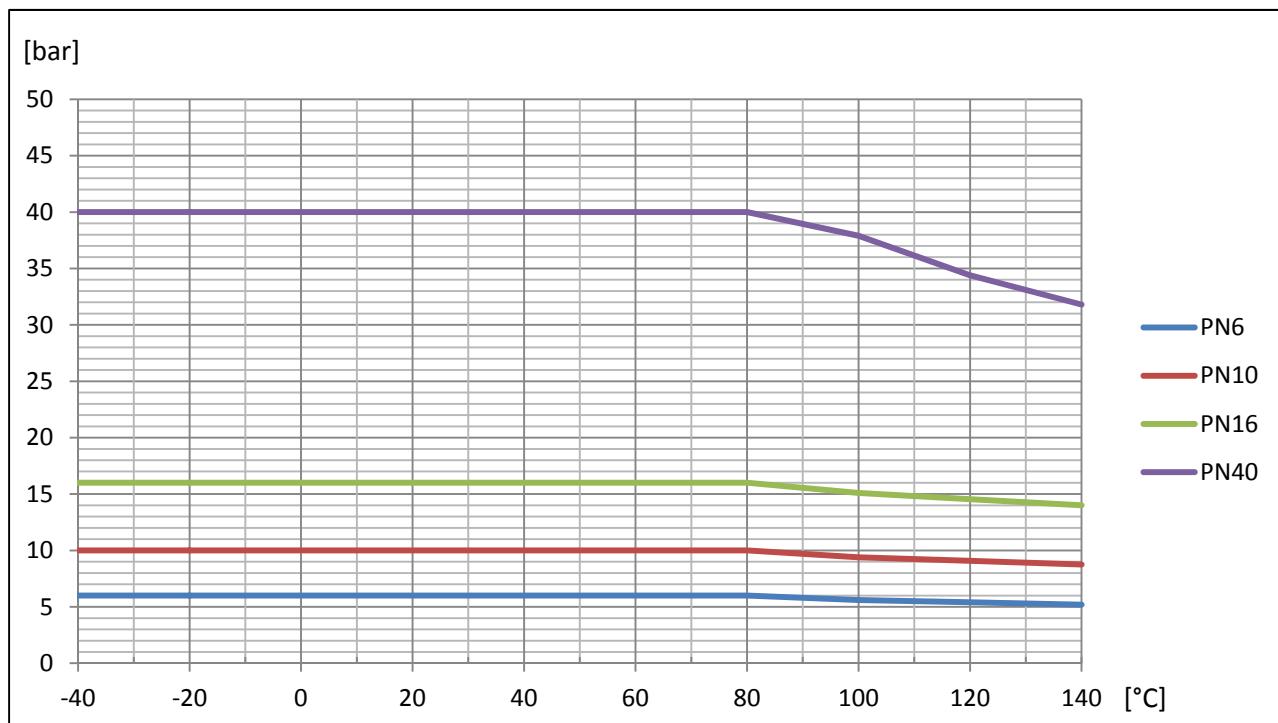

Use support to prevent vibrations

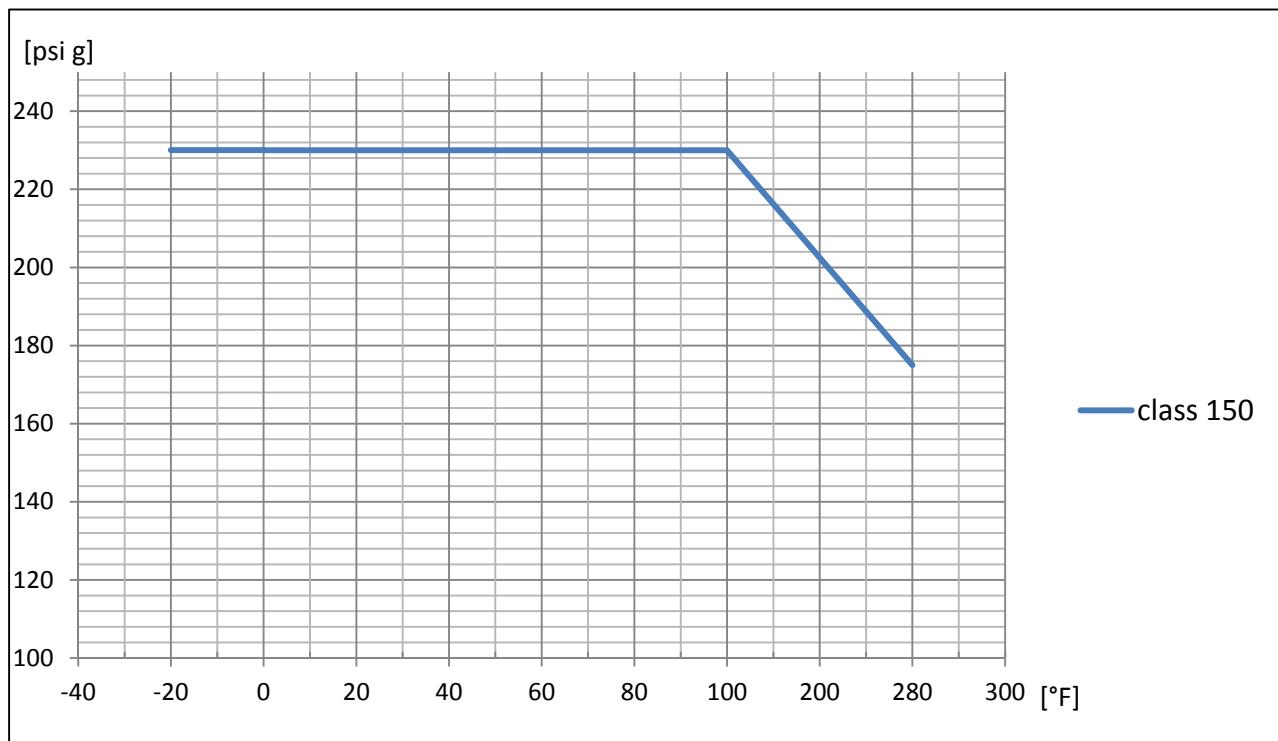

Pipe narrowing with maximum 8° angle

Material load curves

For stainless steel flanges (1.4404 / 316L) according to EN1092-1

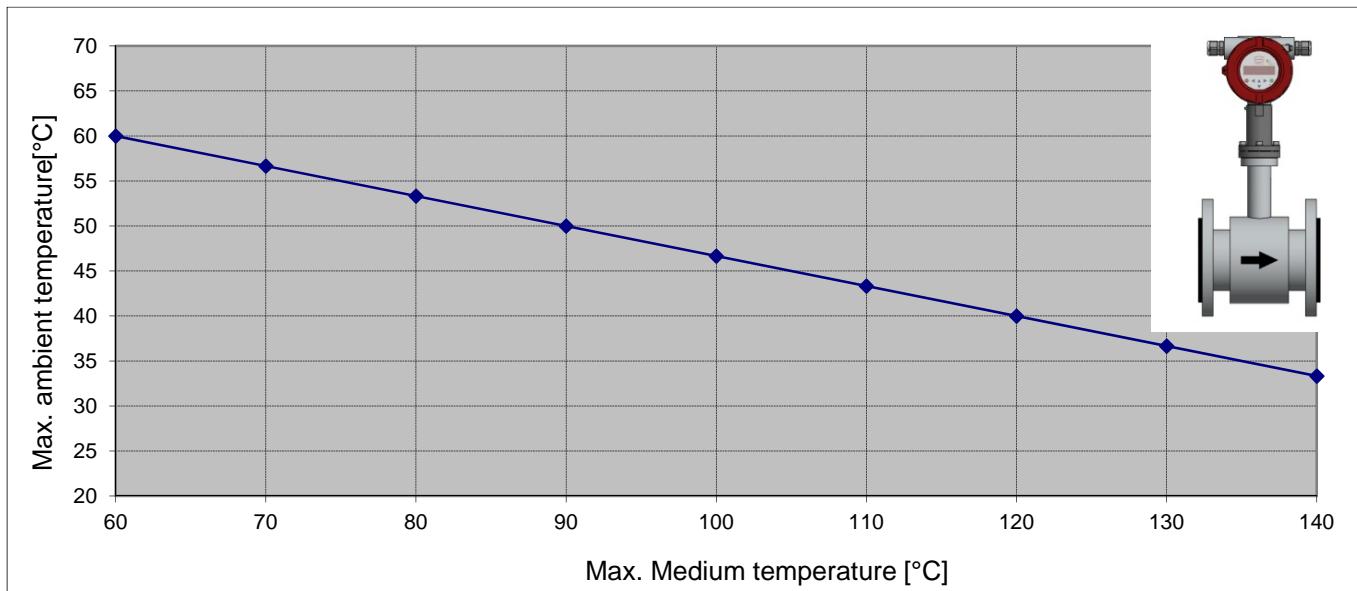

For stainless steel flanges (1.4404 / 316L) according to ASME B16.5

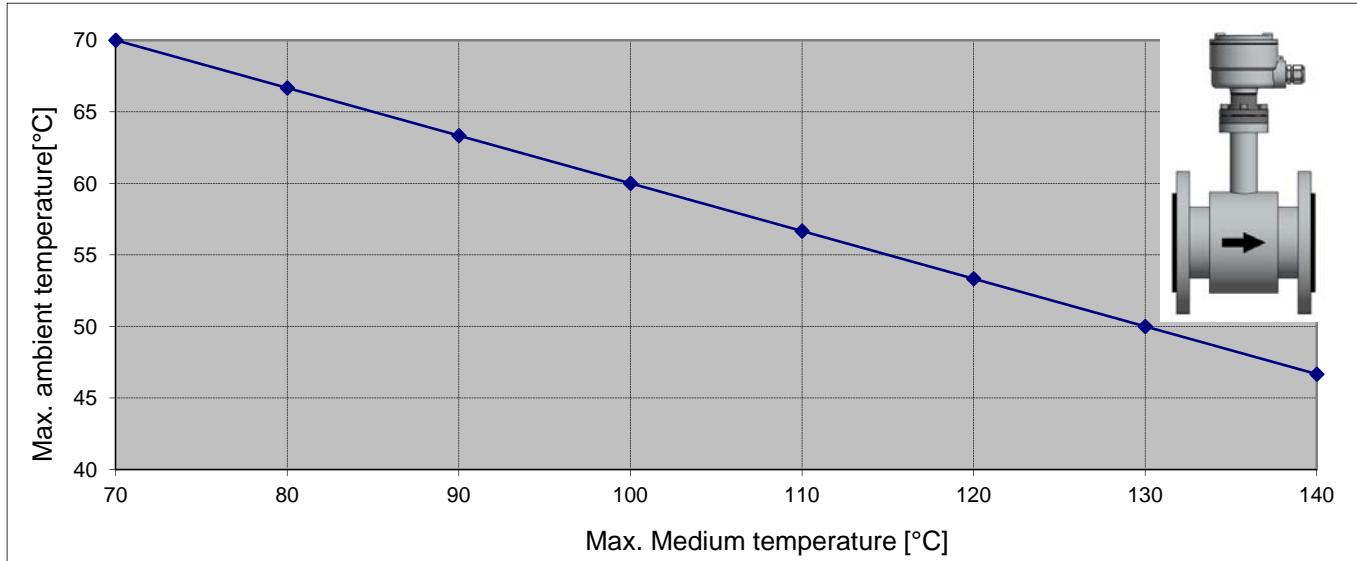

Ambient conditions

As the sensors are an element of the pipe, these are normally thermally isolated when installed to save energy and prevent accidental physical contact. The heat of the process temperature will be transferred through the supports neck of the compact mounted transmitter or the terminal box. For this reason the thermal insulation of the sensor should only extend half way up the support of the transmitter. It is essential not to include the transmitter or the terminal box into the thermal insulation. The maximum permissible fluid temperature range is stated on the rating plate of the respective version.

Maximum ambient temperature according to medium temperature with a direct mounted transmitter

Maximum ambient temperature according to medium temperature with a mounted connection box

Apply the medium temperatures of the lining materials.

Transmitter UMF3

Mounting options:	compact or remote
Degree of protection:	IP68 (EN60529)
Housing:	die cast Aluminum, painted
Power supply:	90-253 VAC 50/60Hz, 10 VA 24 VDC +/- 20%, 10W
Indication:	LCD, 2-lines, 16 digits, background lighted
Interface language:	English, German
Output:	
<u>Standard</u>	
1x Analogue:	1 x 0/4-20 mA HART®, passive, galvanically isolated
2x Binary output:	passive, galvanically isolated 1 pulse output - max. 1 kHz free configurable 1 status output - free configurable e.g. empty pipe
<u>Option</u>	
1x Analogue:	1 x 0/4-20 mA HART®, passive, galvanically isolated
3x Binary output:	passive, galvanically isolated 1 pulse output - max. 1 kHz free configurable 1 status output - free configurable e.g. empty pipe 1 status output - free configurable
1x Binary input:	passive, galvanically isolated
Ambient temperature:	-40 °C to +60 °C, dependant on process temperature
Communication:	HART®
Diagnostic functions:	Empty pipe detection, coil current surveillance
Electromagnetic tolerance:	EMC-Directive 2004/108/EG

Explosion protection:

Potential equalization

The potential equalization is achieved via the grounding terminal of the junction box.

For metallic pipelines we recommend connecting the grounding terminal to the pipe.

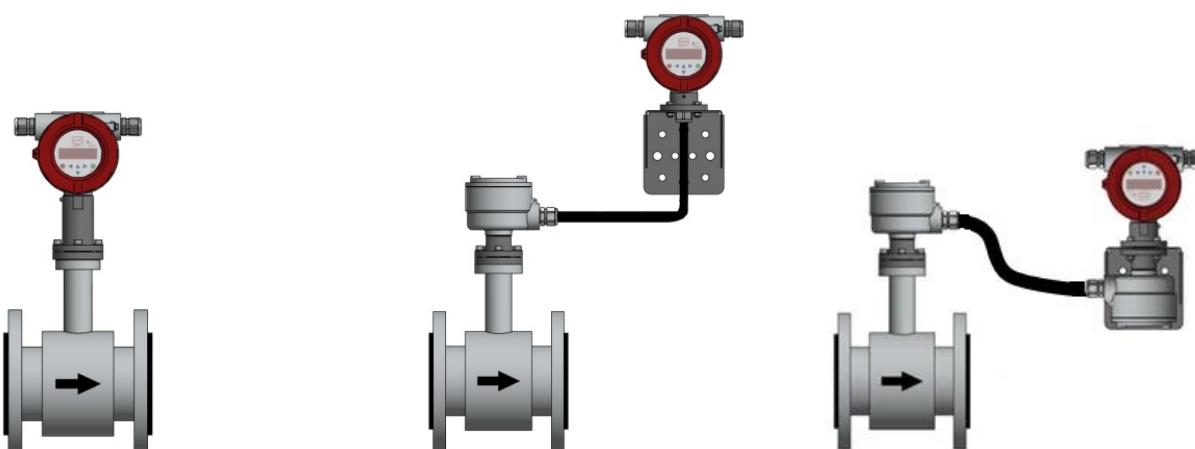

For non-metallic pipelines we recommend connecting the grounding terminal to the grounding discs.

Electrical connections

Mounting types

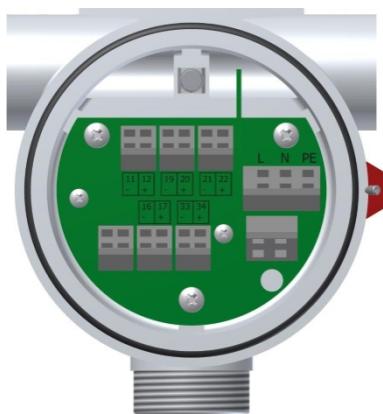

Compact IP65 according to DIN/EN 60529
Dust tight, protected against powerful water jets.

Remote IP65 according to DIN/EN 60529
Dust tight, protected against powerful water jets.
with 2.5m, 5m and 10m factory mounted cable on transmitter

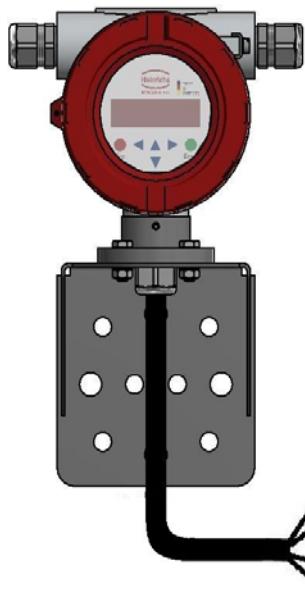

Remote IP68 according to DIN/EN 60529
Dust tight, suitable for continuous immersion.
For distances > 10m, factory mounted cable on transmitter, junction box on sensor resin filled.

Terminal compartment Transmitter

34	Reserved

L, N max. 90-253V AC, 50/60Hz or 24V DC

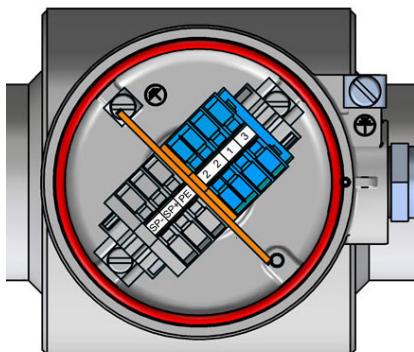

Remote version up to 10m cable

Remote version >10m cable

Ex d junction box (remote version, Sensor and Transmitter)

SP-	Field coil (-) yellow
SP+	Field coil (+) green
PE	Shield protective conductor
2	FE (Sensor protective conductor)
1	Electrode (intrinsically safe circuit Ex i) brown
3	Electrode (intrinsically safe circuit Ex i) white

For remote configuration with 2.5m, 5m or 10m cables, the connecting cable is factory mounted on the transmitter. The terminal configuration is valid for the sensor junction box. For greater distances between sensor and transmitter there are two junction boxes mounted as in the above image, one on the sensor and one on the transmitter.

To sustain best possible interference free measurements, you may consider the following hints:

To avoid errors from cable movement for media with low conductivity, use a protective conduit and/or fasten the interconnecting cable.

Avoid laying the cable close to electrical machines, control gears or other electrical fields.

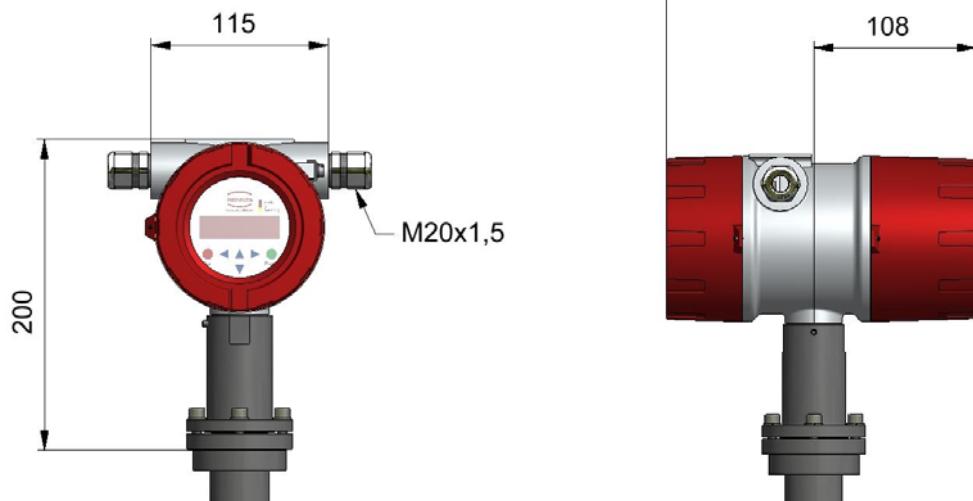

Make sure you have the potential equalization between sensor and transmitter connected.
