EPS

- High accuracy:
0.3 % of actual flow
- Maintenance-free
- No pressure drop
- Numerous lining materials
- Numerous electrode materials
- Low-cost grounding electrode instead of earthing rings, also available in special materials e.g. tantalum

Function

An electrically conductive medium flowing through an orientated magnetic field in accordance to Faraday's law of induction will induce a voltage proportional to the mean flow velocity rate and hence the volumetric flow. A magnetic inductive flowmeter consists of an isolated lined tube, through which a conductive liquid flows, a magnetic field coil and two electrodes. The electrode voltage is detected by a transmitter and converted into standardised electrical signal such as 4-20 mA or pulses. The sensor EPS can be used in combination with the KOBOLD UMF2 transmitter. The transmitter can be mounted compact or separately to the sensor.

Application

The magnetic-inductive flow sensor EPS is used to measure the volume flow of liquids, slurries, pastes and other electrically conductive media without any pressure drop. Pressure, temperature, density and viscosity do not affect the volume measurements. Solid particles and small gas bubbles should be avoided.

The sensor EPS has the following significant characteristics:

- Wide variety of lining materials
- Electrodes in stainless steel, Hastelloy® C4, tantalum, Platinum
- Large selection of process connections
- Deployable in harsh environments

Technical Details

Sensor EPS

Armature:	painted steel (standard), stainless steel at DIN11851; Tri-Clamp® and ceramic lined 2/3/6/10 mm inside diameter
Nominal sizes:	2/3/6/10 mm inside diameter process connection in DIN-DN10 or ASME ½" EN1092-1/JIS DN15... DN1200-ASME ½" ... 24" (other nominal sizes on request)
Process connection:	flanges of steel or stainless steel 1.4301 (EN1092 and ASME B16.5), food connection DIN 11851, Tri-Clamp® (other connections on request)
Lining material:	hard rubber, soft rubber, PTFE, ceramics, EPDM
Electrode material:	Hastelloy® HC276, C22, stainless steel 1.4571/316 Ti titanium, tantalum and platinum-rhodium (on request)
Grounding ring:	on request
Nominal pressure:	PN40, (40 bar) (580 psi) DN15 ... 300 PN16, (16 bar) (232 psi) DN50 ... 600 PN10, (10 bar) (145 psi) DN200 ... 1200 (higher pressures on request)
Process temperature:	-10 ... +70 °C (14 ... +158 °F) EPDM -20 ... +150 °C (-4 ... +302 °F) PTFE -20 ... +150 °C (-4 ... +302 °F) ceramics (EPDM gasket) -20 ... +130 °C (-4 ... +266 °F) ceramics (PTFE gasket) 0 ... +95 °C (32 ... +203 °F) hard rubber 0 ... +70 °C (+32 ... +158 °F) soft rubber
Ambient temperature:	-20 °C ... +60 °C (-4 ... +140 °F), depending on process temperature
Conductivity:	≥ 5 µS/cm ≥ 20 µS/cm with demineralised water
Measuring ranges:	0.5 m/s ... 10 m/s
Accuracy:	± 0.3% of measured value ± 0.01% * (Q at 10 m/s) (under reference conditions)
Repeatability:	± 0.15% of measured value ± 0.005% * (Q at 10 m/s) (under reference conditions)
Protection:	IP67 (EN60529), IP68 on request

Accuracy

$\pm 0.3\%$ of measured value + $0.0001 * (Q \text{ at } 10 \text{ m/s})$

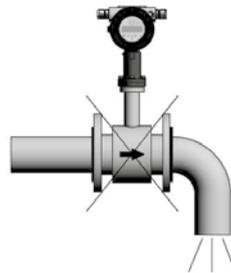

Repeatability

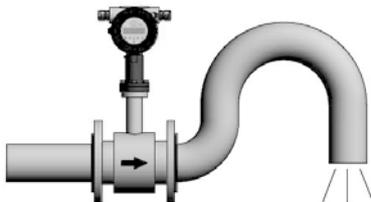

$\pm (0.15\%$ of measured value + $0.00005 * (Q \text{ at } 10 \text{ m/s})$

Installation Conditions

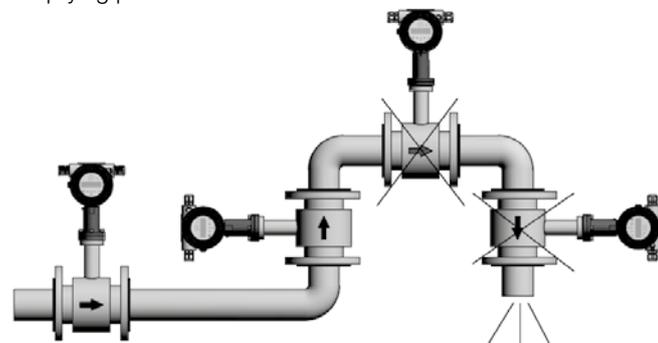

To avoid vacuum, emptying of pipes or gas aggregation please take notice of the following mounting advice.

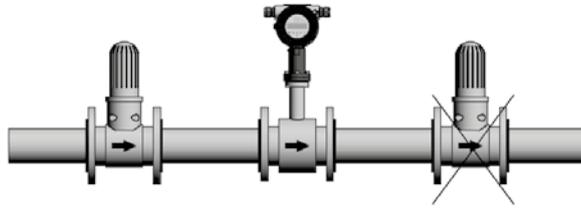

Emptying possible

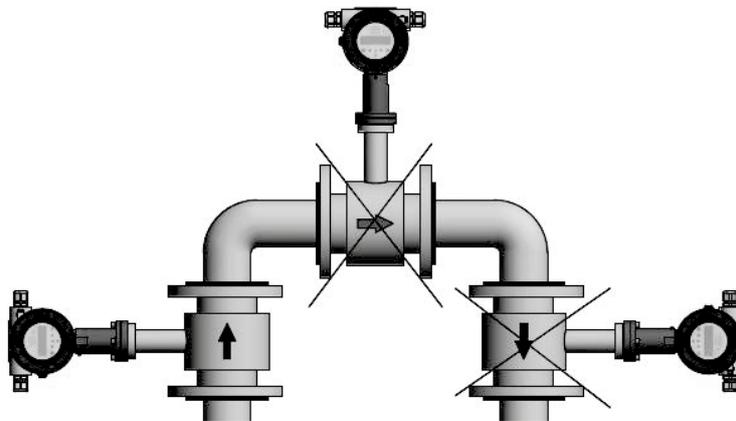

Emptying avoided

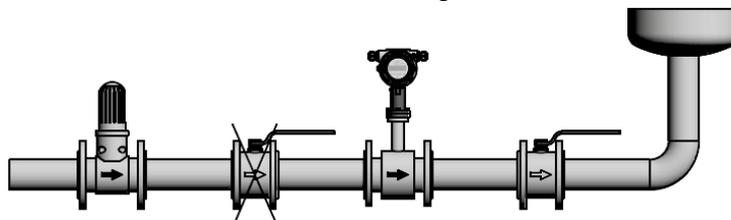

Installation Conditions (continued)

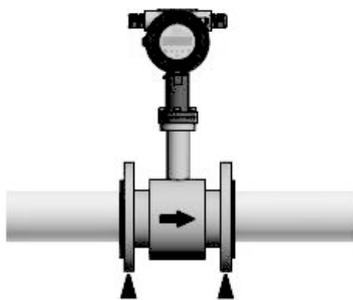

Upstream of pump, vacuum possible

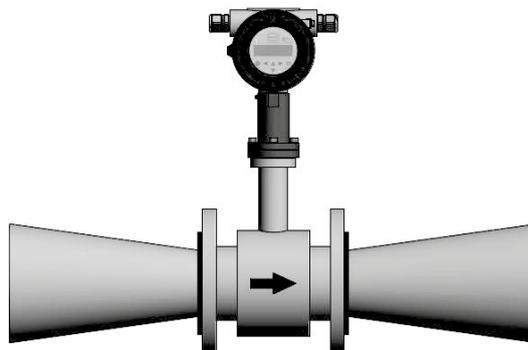

Mount in ascending main

Do not mount downstream of a valve

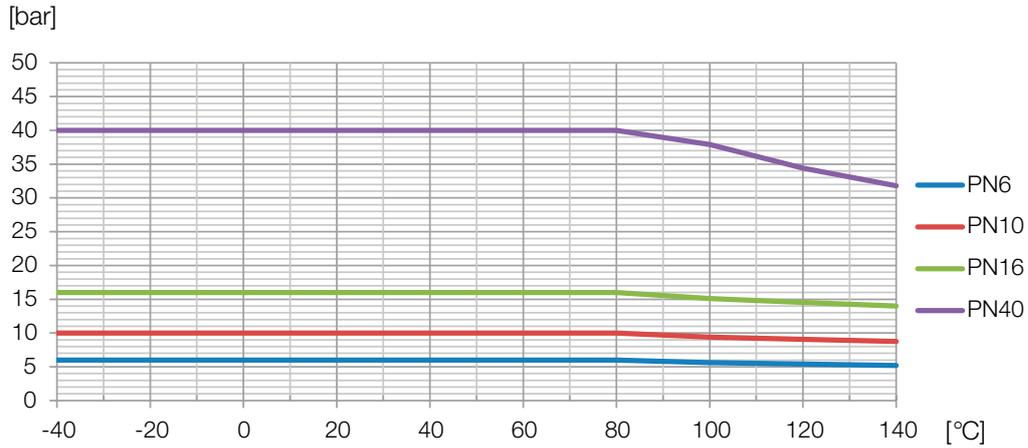

Use support to prevent vibrations

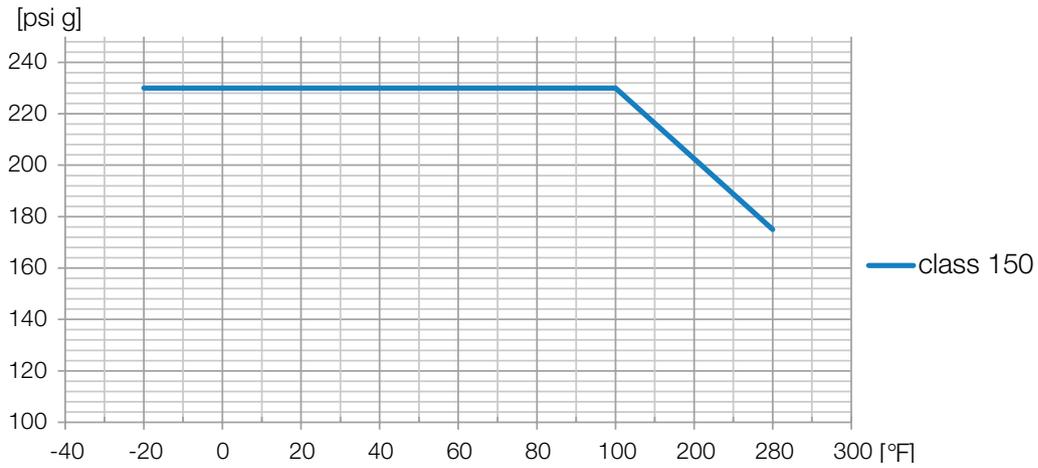

Pipe narrowing with maximum 8° angle

Material Load Curves

For stainless steel flanges (1.4404 / 316L) according to EN1092-1

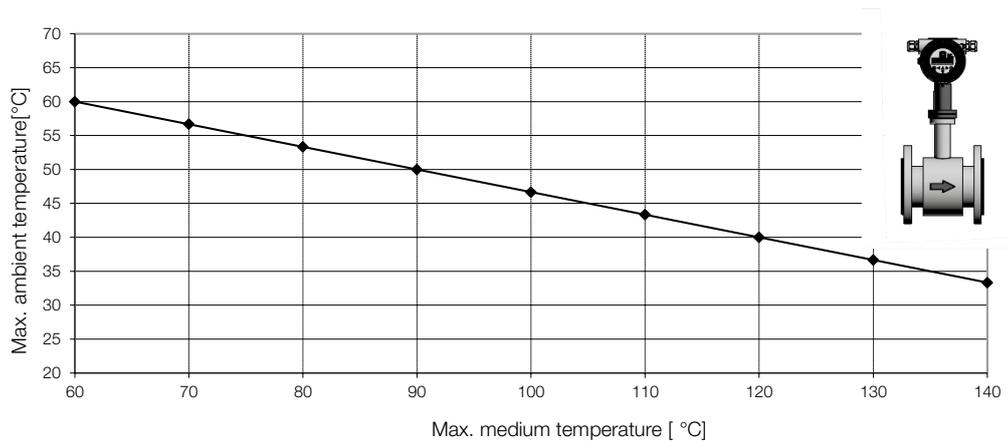

For stainless steel flanges (1.4404 / 316L) according to ASME B16.5

Ambient Conditions

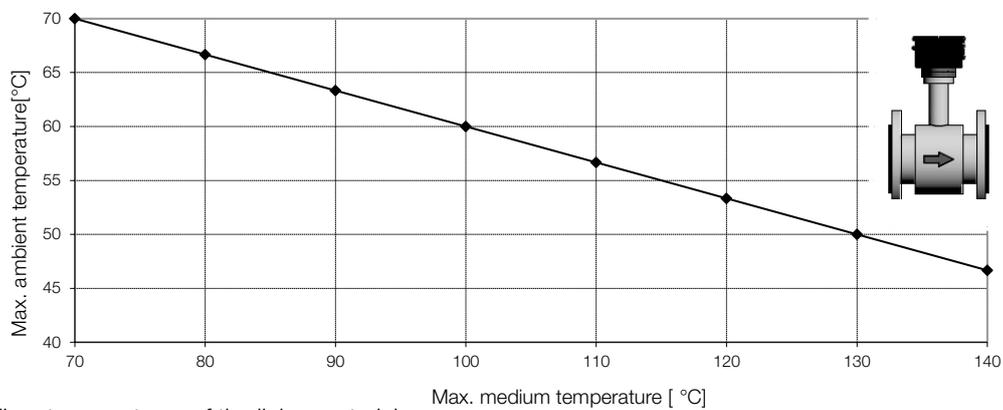

As the sensors are an element of the pipe, these are normally thermally isolated when installed to save energy and prevent accidental physical contact. The heat of the process temperature will be transferred through the supports neck of the compact mounted transmitter or the terminal box. For this

reason the thermal insulation of the sensor should only extend half way up the support of the transmitter. It is essential not to include the transmitter or the terminal box into the thermal insulation. The maximum permissible liquid temperature range is stated on the rating plate of the respective version.

Maximum ambient temperature according to medium temperature with a direct mounted transmitter

Maximum ambient temperature according to medium temperature with a mounted connection box

Apply the medium temperatures of the lining materials.

Technical Details Transmitter

UMF2

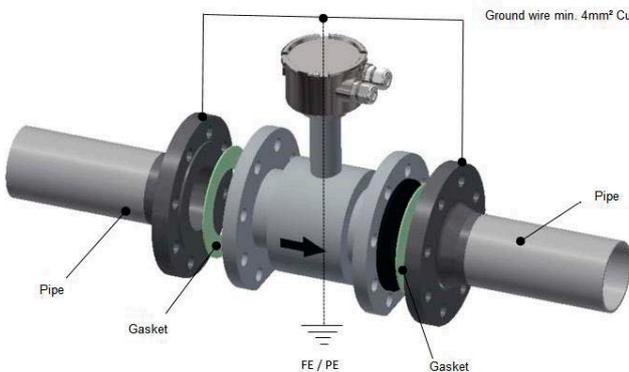

Mounting options: compact or remote
 Housing: die cast aluminium, painted
 Power supply: 115/230 V_{AC} 50/60 Hz, 10 VA
 24 V_{DC} 10 W

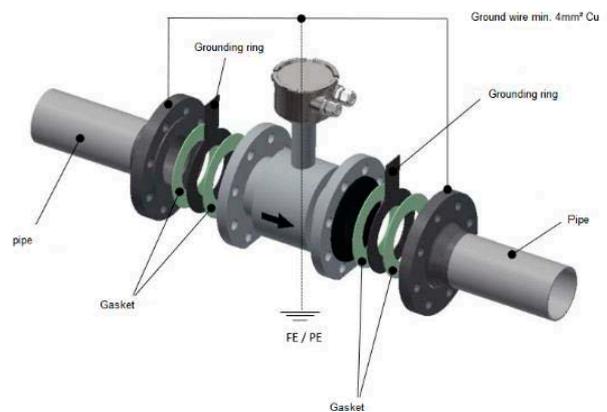

Indication: LCD, 2-lines, 16 digits, background lighted
 Interface language: English, German
 Output:
 Analogue: 1 x 0/4-20 mA HART®, active, galvanically isolated
 Pulse output: passive, galvanically isolated 24 V, 60 mA
 Status: passive, galvanically isolated 24 V, 60 mA
 Ambient temperature: -20 °C ... +60 °C (-4 ... +140 °F), depending on process temperature
 Protection: IP68 (EN60529)
 Communication: HART®
 Diagnostic functions: empty pipe detection, coil current surveillance
 Electromagnetic tolerance: EMC-Directive 2014/30/EU (EMC)

Potential equalisation

The potential equalisation is achieved via the grounding terminal of the junction box.

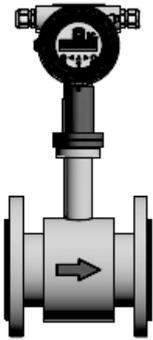

For metallic pipelines we recommend connecting the grounding terminal to the pipe.

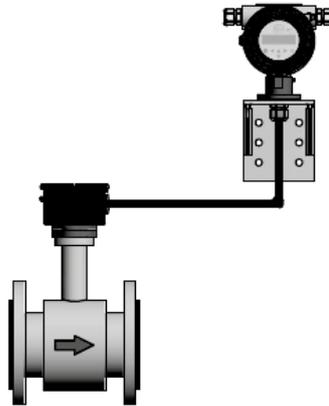

For non-metallic pipelines we recommend connecting the grounding terminal to the grounding discs.

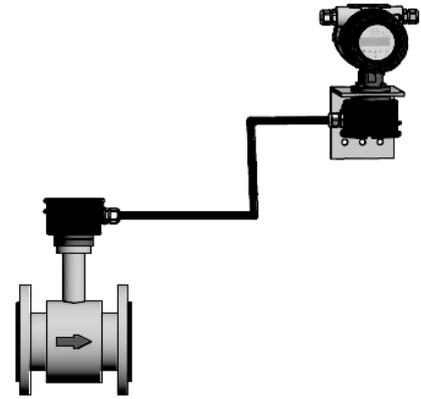

Electrical Connections
Mounting types

Compact IP65 according to DIN/EN 60529
 Dust tight, protected against powerful water jets.

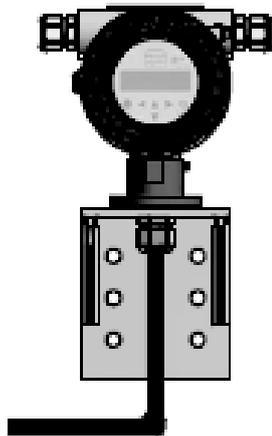

Remote IP65 according to DIN/EN 60529
 Dust tight, protected against powerful water jets.

Remote IP68 according to DIN/EN 60529
 Dust tight, suitable for continuous immersion.

With 2.5 m, 5 m and 10 m factory mounted cable on transmitter.

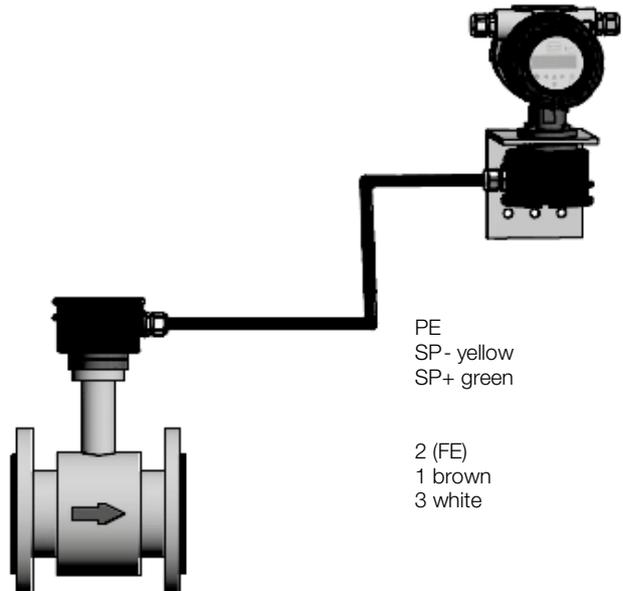

For distances >10 m, factory mounted cable on transmitter, junction box on sensor resin filled.
